## Kratak uvod o razvoju novca

Razmena

#### Papirne novčanice

### Bezgotovinsko plaćanje

Plaćanje bez ikakvog fizičkog kontakta sa novcem.

Svodi se na to da banke u svojim bazama podataka prate transakcije i održavaju stanja računa svojih korisnika.

IK #1		BAN	NK #2
+ £52.00		CECILLE	+ £445.00
- £5712.00		TAMICA	- £4981.00
+ £1593.00		LEANDRA	+ £23.00
	+ £52.00 - £5712.00	+ £52.00 - £5712.00	+ £52.00 CECILLE - £5712.00 TAMICA

# Kriptovalute

## Sta je kriptovaluta?

Kriptovaluta je decentralizovan oblik digitalne imovine koja se koristi kao sredstvo razmene koristeći kriptografiju kao način zaštite podataka.

### Kako funkcioniše?

Postoji glavna knjiga koja sadrži sve transakcije napravljene odgovarajućom kriptovalutom. Svi korisnici imaju kopiju glavne knjige i da bi se neka transakcija odobrila, mora da se poklapa sa većinom kopija.

#### Blockchain

Blockchain je konkretan oblik organizacije glavne knjige.

Svaka transakcija predstavlja jedan enkriptovani blok u lancu blokova.

Softver zapisuje nove transakcije nakon čega ažurira sve kopije blockchain-a.

Za sprečavanje prevara, koristi se jedna od dve tehnike validacije: proof of work ili proof of stake

### Tehnike validacije

#### Proof of work

Ovo je tehnika gde se generise matematički problem za koji se računari trkaju da ga reše.

Rešavanjem problema se pomaže pri verifikaciji transakcije koja se potom dodaje u lanac blokova.

Racunar koji prvi reši problem je nagrađen.

#### Proof of stake

Ovo je tehnika gde se za odobravanje verifikacije bira jedan korisnik iz grupe korisnika koji su uložili svoje kriptovalute.

Što je veći ulog, veća je šansa da korisnik bude izabran.

Ako dođe do odobravanja nevažeće transakcije, gubi se deo uloga.

Učestvovanje u validaciji se naziva rudarenje (mining) i nagrađuje se kriptovalutom.

#### Prednosti

- Decentralizacija
- Nisu potrebne banke

#### Mane

- Troši puno energije
- Promenljivost vrednosti
- Ne mogu da se koriste za sve

### Primeri

Bitcoin

Cardano

Ethereum

Litecoin

## NFT (Non Fungible Token)

NFT su tokeni zasnovani na blockchain tehnologiji koji reprezentuju jedinstvenu imovinu kao sto je umetničko delo ili digitalni sadržaj. Moze se smatrati trajnim digitalnim sertifikatom vlasništva neke imovine, bilo fizičke ili digitalne.

Dizajnirani su da budu kriptografski proverljivi, jedinstveni ili jako retki i lako prenosivi.

Kreiraju se tako što vlasnik potpiše blockchain transakciju koja sadrži fundamentalne detalje tokena, koja se emituje blockchain-u koji aktivira funkciju pravljenja tokena i pripisuje ga odgovarajućem vlasniku.

#### Primeri

Vlasnik twitter-a je prodao NFT svog prvog tweet-a za 2.9 miliona dolara

Jedan umetnik je prodao NFT svih svojih dela za priblizno 69 miliona dolara

Hvala na pažnji
